Bio-Qi™ Medicine Technology

Bio-Qi™ Medicine Technology is the art and science of health balance with vibration. Though a relatively new field of study and application, its theoretical routes are firmly grounded in foundations of science and physics.

Fundamental to our technology is the view that a living body has a subtle energy field which sustains and vitalizes it. It is not necessary for a client to be present for the practitioner to 'tune in' to him/her. Something unique to the client such as a signature or hair sample may be used as a proxy, or 'witness'. In order for a practitioner to carry out an analysis and training procedure, the client completes a case history form and gives his/her consent. (In the case of children or animals the consent of the parent/guardian or owner/trainer is required). Consent can be withdrawn at any time. All information provided by patient is held in the strictest confidence. Our technologies have also been successfully employed in horticulture and agriculture.

The Technology employs mechanical vibrations (such as sound) and electromagnetic forces, including visible light, magnetism, monochromatic radiation (such as laser beams), and rays from other parts of the electromagnetic spectrum. They involve the use of specific, measurable wavelengths and frequencies to achieve individual's health balance. It involves the creation and use of materials and devices at the level of molecules and atoms. It's a highly specific intervention at the molecular scale for nourishing or repairing damaged tissues, such as bone, muscle, or nerve. It is based on application based on discoveries in physics and chemistry.

In this technology, we use a voice print - a visual display of the patterns created by the voice-to assess the working and health of the body. Voiceprints are as unique to the individual as fingerprints, and their characteristics provide an astonishingly clear view of what is happening inside our cells and organs. We look at the voiceprint for the patterns and then at the individual waveforms for type and size. They are then compared to atomic and molecular weight of substance. Information collected from the voiceprint is non-discriminatory, all information is available. Groups of clients with the same patterns can be compared for similarities of body imbalance, etc.

The technology has been around for decades, for centuries and for millennia. Everything in solid existence is composed of energy waves organized in coherent patterns. At the atomic level, molecules that make up our bodies have particles with differing speeds of spin. Every cell in our bodies has its own particular blueprint frequency correspondence wavelength of energy for peak health. Our technology addresses body imbalance by entraining the weak cells to vibrate at particle level to the correct frequency.

(Note : There is a legal requirement for parents/guardians to obtain adequate care for children, and owners/trainers to obtain veterinary care for animals. Our technology is not a substitute for this.).
